

Battle Royale for Mobile

An **offline mobile battle royale shooter** featuring a fast-paced combat experience against a variety of enemy types. The project focuses on delivering intense survival-oriented gameplay with multiple threats, responsive shooting mechanics, and progressively challenging encounters.

Players must fight their way through a hostile environment while managing different enemy behaviors and combat situations, creating a gameplay loop that combines **shooting, survival, and tactical positioning**.

Key Features

• Multiple Enemy Types

- Fight against aggressive **zombies** with close-range attack behavior.
- Engage armed **shooter enemies** capable of ranged combat.
- Face defensive **turrets** that create additional threats during encounters.

- Designed to support additional enemy types and combat variations.

• Shooter Combat

- Fast-paced shooting gameplay designed for mobile platforms.
- Multiple combat encounters requiring players to aim, react, and manage threats.
- Combat-focused gameplay built around responsive player control.

• Offline Gameplay

- Fully playable without an internet connection.
- Enemy encounters and combat systems are handled locally.
- Designed around a self-contained single-player experience.

• Survival-Oriented Gameplay

- Players face multiple enemy types simultaneously.
- Increasing combat pressure creates challenging encounters.
- Requires players to manage positioning and prioritize different threats.

Technical Focus

The project focuses on adapting a **battle royale-inspired combat experience for mobile and offline gameplay**, combining shooter mechanics with AI-driven enemies and defensive systems.

The result is a fast-paced mobile shooter designed around **survival, enemy variety, and continuous combat**, with an architecture that can be expanded with additional weapons, enemies, maps, and gameplay mechanics.
